

MANUFACTURE TEAM CHALLENGE

Wales Round COMPETITION BRIEF

2018 - 2019

Submitted By: Daytun Unit

Introduction

Cranes are a common everyday item something we take for granted, but they take many forms and styles depending on their usage. Your challenge is to design a suitable crane for this use!

The project brief

This brief specifies the requirements for the design and manufacture of a table top crane that is designed to lift Steel objects varying from 50g to 1 Kg in weight from the floor below the table, to a receptacle placed upon the same table top as the crane. See appendix 2 for positioning of crane, objects and receptacle as well as the list and size of the objects.

Description of Project

The crane is required to:

- o Lift 6 objects from multiple floor positions as shown in appendix 2.
- o Lift 6 objects from the floor at a distance of no less than 600mm and no greater than 1000mm below the base of the crane.
- o The movement of the crane must be controlled from a hand held remote on a minimum of 1 metres of cable.
- o The crane should use any suitable means to lift the objects.
- o The system should be powered electrically using a maximum of 18 Volts for safety purposes. This can be battery or via a purchased mains adapter.
- o The crane must be able to rotate through a full 360 degrees at its base.
- o The crane must be counter balanced to prevent tipping and no attachment or clamping to a table will be allowed.

- The crane boom arm must be able to move from horizontal, through a minimum of 90 degrees to vertical.
- The crane will be required to deposit all 6 items into the receptacle.
- **Safety**
 - The system should be able to be switched off via a key.
 - Any mechanisms and surfaces should be free from being a trap, crushing or cutting hazard.
 - The system should have an emergency stop to cut all power and allow the cart to come to a natural rest.
 - All electrically conductive parts must be guarded.
 - No sharp edges should be evident.

Accuracy

The crane will be required to demonstrate: -

- Accuracy of movement by lowering and depositing the smallest item onto a target.

EQUIPMENT, MACHINERY, INSTALLATIONS AND MATERIALS REQUIRED EQUIPMENTS PROVIDED BY ORGANISERS

(3 Marks reduce by 0.5 marks for each problem found)

Test: Judges check the Crane for sharp edges. No sharp edges found 3 Marks. Reduce by 0.5 for each sharp edge found.

Accuracy

The crane will be required to demonstrate: -

- Accuracy or movement by lowering and depositing the smallest item onto a target in the fastest time.

(5 Marks)

Test: The 50g object will be lifted by the crane. The crane may be set to a position ready to lift. At the start of the clock the object must be lifted, manoeuvred and placed within a 10CM circle. The fastest team will receive 5 Marks. The slowest team will receive 0 Marks. Each other team will be graded in 10% categories in between, losing 0.5 marks for each band after the fastest.

Time Trial

All 6 objects will be lifted from the positions specified in Appendix A and placed into the receptacle. One person shall be required to control the crane and complete the task.

(10 Marks)

Test: The team shall start with the lifting mechanism retracted to the boom. The boom shall be vertical. The crane shall be turned so as to face away from the lifting objects by 180 degrees.

On clock start the operator using only the controls in the handset must lift all objects into the receptacle. Once the final object is placed in the receptacle the clock will be stopped. The fastest team wins 10 Marks, second wins 9, third wins 8 and so on, till 1 mark is gained by the 10th placed team.

Portfolio B – to be presented at the start of the competition (10 Marks)

The teams will bring with them in their portfolio:

- Manufacturing drawings for all components to be made. (Autodesk Inventor, AutoCAD or similar)
- 3D Assembly drawing(s). (Autodesk Inventor or similar)
- Electronic block diagrams/drawings. (AutoCAD Electrical or similar)

B. Manufacturing Costs (10 Marks)

Working hours

For every 10% more expensive than the team with the lowest calculated working hours cost (see note below), 0.5 Marks will be deducted proportionally. **(5 Marks)**

Additional cost for using equipment

For every 10% more expensive than the team with the lowest additional equipment cost (see note below), 0.3 Marks will be deducted proportionally. **(3 Marks)**

Raw materials

For every 10% more expensive than the team with the lowest additional equipment cost (see note below), 0.2 Marks will be deducted proportionally. **(2 Marks)**

Compliance.

The total cost of equipment, materials and labour will be modified by project compliance to specification.

Compliance to specification means that your marks for your built project will be calculated as a percentage and adjust your costings as follows.

$$\text{Final build cost} = \frac{\text{Total cost} \times 100}{\% \text{ compliance to specification}}.$$

Examples

If total cost is £2,500 and compliance is 100% then build cost would be £2,500

If total cost is £2,500 and compliance is 80% then build cost would be £3,125

If total cost is £2,500 and compliance is 60% then build cost would be £4,167

If total cost is £2,500 and compliance is 40% then build cost would be £6,2500

If total cost is £2,500 and compliance is 20% then build cost would be £12,500

If total cost is £2,500 and compliance is 0% then no marks awarded for cost section.

C. Portfolio A (20 Marks)

A portfolio is to be presented prior to the competition start. This portfolio is to be assessed as a component of this project. The portfolio is to be presented in hard copy in a folder and to

Additional rules

- Teams may have any notes and sketches they require to build the project, but these must be handwritten/drawn and not printed.
Printed circuit diagrams are acceptable
- Teams are required to provide all the tools and raw materials they require for the project. Teams may borrow tools and equipment from other teams, if they are willing, but will incur a 15-minute time penalty added to their build time for each tool or piece of equipment borrowed.
- Any areas that are not fully understood should be queried prior to the competition. Any misreading of the rules of the competition will be deemed as your own fault and the judge's decisions as to interpretation will be final.
- You are required to wear Safety Goggles/Glasses and Steel Toe Cap Boots/Shoes as a minimum at all times during the competition.
- As a guide you will be able to work from 9:30AM to 3PM on the day of the competition. You are expected to design and schedule your activities to fit within this time. Failure to complete all elements within this time will lead to the forfeiture of marks for uncompleted areas. Extra time can be given to all teams at the Judge's discretion.
- All of the components and parts should be manufactured during the competition by the team. Items it is not possible to manufacture such as wheels, batteries, solar panels etc. will be allowed. Any item that the Judges deem the team could have made will incur a penalty. See penalty table.

Rhagarweiniad

Mae craeniau'n bethau cyffredin, yn beiriannau a gymerwn yn ganiataol, ond mae yna lawer o wahanol fathau ohonynt yn ddibynnol ar y ffordd y maent yn cael eu defnyddio. Yr her i chi yw cynllunio craen ar gyfer y defnydd canlynol!

Crynodeb o'r prosiect

Mae'r crynodeb yma'n nodi gofynion y cynllun a'r gweithrediad o graen sydd i'w gosod ar fwrdd ac wedi cael ei chynllunio i godi gwrthrychau Dur o'r llawr o dan y bwrdd i fyny ar y bwrdd ac i mewn i ddaliwr sydd ar yr un bwrdd a'r craen. Bydd y gwrthrychau yn amrywio yn eu pwysau o 50g hyd at 1kg

Gweler atodiad 2 am fyw o fanylion am osod y craen, y gwrthrychau a'r daliwr a hefyd, restr o'r gwrthrychau a'u maint.
