This is the maximum number of entries permitted by an organisation for this competition.

This is determined by 'location' and 'organisation'. 'Organisation' refers to the competitors' training provider/employer. 'Location' refers to a site where the competitor studies / is employed. For further guidance on these capacities, click [here](#)

## **Brief**

### **The competition is based on the following scenario:**

Your team has been contracted to find a holistic energy solution to Carreg Las, an island 5 miles off the West coast of Wales.

The island currently relies on electricity being generated by 4 large diesel generators installed in the 1970's. The costs of purchasing and transporting the diesel from the mainland (currently £400k a year) are increasing year on year, the environmental impact of these generators as well as the increasing concern that the generators are not able to cope with the expanding population and activity on the island have led the Island council to contact you.

The island council have agreed to seek a more environmentally friendly solution to their energy needs and have asked for you to put an application together for the Welsh Government Greener Future grant to meet their current and future needs.

Information relating to the island:

- 3 miles wide by 8 miles long,
- Has one mountain at 1800 feet peak
- Has a population of 2,000 people, mainly situated in the small town
- 800 homes, mainly 1970s construction

- 400 cars, a mixture of diesel and petrol
- 1 ferry which crosses twice a day (vehicles and passengers)
- 1 school
- 1 health centre
- 1 chapel and 1 church
- 2 supermarkets
- 30 High street properties (shops, pubs, restaurants etc)
- 1 300-acre dairy farm
- 1 fishing harbour with 3 commercial fishing boats
- 2 buses which act as a service bus and a school bus
- 1 fish food factory
- 1 small dairy food factory
- 2 garages
